

Refreshment Center 1

BLACK MILLENNIA® STYLING

Vend beverage, food, snack and candy or any combination thereof with the new refrigerated Refreshment Center 1. Superior insulation features include foamed-in-place cabinet and door and heated dual pane gas-filled glass. RC1 is ideal for smaller populated vending accounts, OCS locations and the school segment.

Refreshment Center 1

Model 780

Refreshment Center 1 is ideal for smaller site vending with the flexibility to offer fresh food, beverages, snack and candy.

SureVend™ is a remarkable guaranteed product delivery system.

The type of innovation you've come to expect from National Vendors. Infrared technology detects whether the vended product has dropped, guaranteeing that your customers either receive their product, or get their money back. It keeps customers happy and profits healthy.

Food & Beverage Configuration

Vend fresh food and beverages simultaneously for smaller accounts.

Maximize opportunity in school accounts where health concerns require you to vend not just Milk beverages, but also dairy based snack alternatives. Vend Milk, Yogurt, Cheese products and other healthy foods.

All Food Configuration

For lower volume food accounts, the all food configuration provides a cost effective solution for automated feeding.

Snack, Candy, Food, Beverage Configuration

Perfect for OCS locations or as a satellite offering to a main bank of equipment. Vend the four main vending product categories from a single machine.

Snack, Candy, Beverage Configuration

Where perishables are not required, vend candy, snack and beverage for smaller sites. The RC1 is ideal for OCS or as a satellite retail point in a traditional vending account.

Temperature Control

Unlike other machines, the RC1 is field configurable to operate with or without NAMA Health and Safety control using a 1/2 HP refrigeration system and heated dual pane gas-filled glass for energy efficient operation. Temperature set points are adjustable dependent on mode of operation. Health and Safety lock out only affects the controlled zone if activated.

Dual Temperature Capability

An adjustable divider creates zones within the Refreshment Center 1 to segregate perishable food or beverage items from snack and candy.

Attractive Merchandising

Special bottle shelves and spirals optimize presentation to consumers providing eight selections per shelf and 48 unit capacity.

Easy Loading

Trays slide out and tilt forward making it easy to load even the upper shelves.

F.I.F.O. Coupling

Assure even sell down of like products with the F.I.F.O. Coupling feature. Couple up to 10 selections on the same tray to assure proper SKU rotation.

Merchandising Flexibility

Sell single and double column items from the same shelf to maximize space to sales ratio and throughput.

Continuous Price Rolls

Just dial up the correct price. No more little price tabs that fall out, get lost, or are hard to apply.

Food & Bottle Configuration

Selections: 15 Food
16 Bottle
